## PERSONAL PROFILE

Growing up around computers, I quickly acquired a passion for tinkering with them. I was introduced to NSS and software development by a friend and decided to do some self-study and discovered the enjoyment of it. The logic of coding gave me a new sense of satisfaction I had never felt before. It's something I had never thought I would be able to do and now, I am having a blast creating and developing software.

## PROJECTS

### KBD Customs: Front-end Capstone

A custom keyboard build that allows you to save all items needed in a keyboard build as well as a page to share your personal builds with other users. The app also provides useful info on startup guides, shops, and informational guides for users who are new to creating custom keyboards.

- **React** application
- Created a **JSON** database to store all keyboard components such as PCB, Case, Keyswitch, and Keycap.
- Used **Reactstrap** and **Bootstrap** to shape a simple and clean design for the entire app

### Group Project:

#### Trestlebridge Farms / Glitter-Bug (C# Project)

- For each resource in the project we needed to find where it would be stored, what the resource produces when processed, and how much it would produce by bug fixing, implementing new features, and revising code.
- Learned how to have more leadership and communication with my team
- Learned how to better document and solve our issues
- Learning how to tackle tickets and decide how to accomplish them as a team in a quick and concise manner.

## EDUCATION

**Nashville Software School:** APR 2019 - Sep 2019  
Full-Stack Development Bootcamp

## TECHNICAL EXPERIENCE

### Nashville Software School

#### SOFTWARE DEVELOPER

APR 2019-SEP 2019
